EDUCATION

Machine Learning Ph.D., CISPA Helmholtz / ELLIS Unit Saarbrücken

Supervisor: Dr. Rebekka Burkholz

Research Topic: Efficiency in Machine Learning

Jul 2026 - Jun 2030

Lab: Relational ML Lab

Informatics M.Sc., Technical University of Munich [Passed with High Distinction]

Thesis: Efficient Large-Scale Data Pruning Using Score Extrapolation

Supervisor: Prof. Stephan Günnemann

Coursework: Deep Learning, Statistical Learning, ML for Graphs and Sequential Data, Advanced NLP, Deep Generative Models, Computer Vision (Detection, Segmentation, Tracking), Computer Vision (Multiview Geometry), Quantum Computing, Tensor Networks, Deep Learning for Medicine

Apr 2023 - Jun 2025

Grade: 1.2/1.0 (Top 10%)

Thesis Grade: 1.0/1.0

Computer Engineering B.Sc., Institute of Engineering, Pulchowk, Nepal

Thesis: An Efficient Video Compression Network

Coursework: Theory of Computation, Data Structures and Algorithms, Object Oriented Programming, AI, Computer Architectures, Discrete Structures, Data Mining, Big Data, Calculus, Linear Algebra, Probability, Statistics

Nov 2016 - Apr 2021

Grade: 79.57% (Top 5%)

ACHIEVEMENTS AND AWARDS

- ▶ Selected as **top 900 of 50,000** students for **Deutschlandstipendium** (Sponsored by Amazon, €3600) **2024**
- ▶ Selected **top 5 nationally** to represent Nepal at 47th **International Physics Olympiad**, Zürich **2016**
- ▶ Represented Nepal in ACM-ICPC, Dhaka regionals **2018**
- ▶ Ranked **29th of 14,000** applicants nationwide to secure a Full Scholarship for Bachelor's degree **2016**
- ▶ **Hackathons**: Winner of A Day of Code (2020), Locus Codejam (2019), National Level Programming Contest (2018), Second Place at DandyHacks (Rochester University, 2020).

KEY SKILLS

Languages	Python (Expert), C++, C, R, Java, Javascript, MATLAB, Latex, Bash/Shell
AI & ML	PyTorch, TensorFlow, Sklearn, Huggingface, OpenCV, Statsmodel, MLflow, Weights&Biases
MLOps & Cloud	Azure, AWS, Terraform, Docker, CI/CD, Slurm, Airflow, Kubernetes, Prometheus
Data Engineering	PostgreSQL, Elasticsearch, MongoDB, PostGIS, SQLAlchemy, Delta Lake, Spark, Snowflake
Web Development	FastAPI, Django, Flask, REST APIs, Streamlit, Dash, React, Vue.js

PROJECTS AND RESEARCH

Effective Data Pruning through Score Extrapolation, Master's Thesis  

2025

We proposed a novel framework for large-scale dataset pruning that eliminates costly full-dataset scoring. Our method extrapolates importance scores using geometric data structure (KNN, GNNs), yielding competitive model performance with substantial end-to-end training time savings across multiple benchmarks and pruning techniques.

Video Compression Net, Bachelor's Thesis  

2020

We introduced a Deep Learning based video compression system that minimizes the number of bits required to encode video frames while also reducing distortion. The major objective of the project was to replace the conventional components in the pipeline of video compression with their neural network equivalents. The trained model equaled the compression ratio of the conventional system.

WORK EXPERIENCE

E.ON <i>Machine Learning Engineer, Full Time</i>	Munich, Germany Apr 2025 - May 2026
▶ Architected end-to-end ML system on Azure using Terraform for infrastructure-as-code, enabling reproducible and scalable deployments with 99% uptime. ▶ Built a comprehensive model lifecycle management using MLflow for experiment tracking, hyperparameter optimization, versioning, and performance monitoring. ▶ Led recruitment, onboarding, and mentorship of two junior data scientists, fostering a high-performing, collaborative, and learning-focused environment.	
<i>Data Scientist, Working Student</i>	Sep 2023 - Mar 2025
▶ Developed novel Robust-PLS algorithm optimized for high-dimensional, correlated feature spaces with outliers, achieving 7% improvement in MAE. ▶ Implemented custom noise detection and reduction algorithms, improving sensor reliability metrics across deployment scenarios.	
Naamche Inc <i>Data Scientist, Full Time</i>	Kathmandu, Nepal Apr 2021 - Mar 2023
▶ Developed end-to-end ML systems for real estate investment optimization, processing \$20M+ in property evaluations. Trained ensemble of ARIMA, Prophet, and LSTM to forecast revenue that only had 14% of error on hindsight. Worked on a physical and geospatial feature extraction pipeline, analyzing 100K+ properties. ▶ Architected a conversational real estate assistant. Implemented BERT-based intent classification and developed custom NLG (GPT-2 fine-tuning) for human-like property descriptions.
